Huvitz

Microscope HOM-700

The **HOM-700** surgical microscope offers a wealth of cutting-edge features that you can customize to create an impressive surgical theater.

An intuitive, high-performance optical system offers high-resolution, outstanding color reproduction and low distortion images for precise diagnosis and operation.

Designed to provide high contrast, detailed imaging, the **HOM-700** features an apochromatic optical system. Sharp, crisp, high-resolution 3D observation provide an enhanced observation experience to surgeons. Fine adjustment of the precision motorized zoom system is reliably and quickly achieved to present the desired magnification effortlessly.

The motorized zoom system allows for fine adjustment to quickly achieve your desired magnification. The **HD** touchscreen monitor can be used to pre-configure surgeon settings, store patient data, and enable video recording. This advanced microscope offers user-friendly functionality and visualization you can count on and is a wise investment for any surgical center that wants to optimize and improve patient care.

The complete integration of workplace components as well as the ability to adapt emerging technologies presents surgeons with a wide variety of solutions to meet all individual requirements.
